ABOUT ME

I'm a Software Engineering graduate from Debre Berhan University with a great distinction who genuinely enjoys the craft of building things whether that's a web app, a mobile experience, or the back end logic holding it all together. I've worked across a pretty wide stack (Java, Python, JavaScript, C#, Node.js, and various databases), but what drives me isn't the tools themselves. It's writing code that actually holds up over time and solves real problems. I'm looking to join a team where good engineering is taken seriously and there's room to keep growing.

SKILLS

Technical Skills

- Java, Python, JavaScript (ES6+), TypeScript, C#
- Angular, React.js, Tailwind CSS
- Flutter, Dart
- ASP.NET Core Web API, Node.js, Express.js
- RESTful APIs, API Integration
- PostgreSQL, MySQL
- Postman, Software Testing & Debugging
- Machine Learning, Scikit-learn, Pandas, NumPy, Data Analysis, CI/CD

Professional Skills

- Team Collaboration
- Problem Solving
- Critical Thinking
- Communication
- Time Management
- Continuous Learning

EXPERIENCE

Full-Stack Developer Intern — DAFTECH

March 2025 – July 2025

- Developed responsive web applications using Angular for frontend and C#/.NET for backend services.
- Built and integrated RESTful APIs, database solutions, and secure authentication features using .NET technologies.
- Collaborated with the development team to improve application performance, code quality, and maintainable software solutions.

PROJECTS

ServeEase

Technologies: Flutter, Node.js, Express.js, PostgreSQL

- Developed a mobile platform connecting service providers with customers.
- Implemented role-based authentication and user management features.
- Built RESTful APIs for service booking, verification, and management.
- Integrated email verification, document uploads, and administrative approval workflows.

Cafe Management System

Technologies: Angular, TypeScript, HTML, CSS, ASP.NET Core Web API

- Developed a web-based system for managing café operations and customer orders.
- Implemented menu management, order tracking, and staff administration features.
- Integrated frontend components with backend APIs for seamless data management.
- Designed a responsive and user-friendly interface to enhance operational efficiency.

Portfolio Optimization System

Technologies: Python, ARIMA, LSTM, Pandas, yFinance

- Developed a stock price forecasting and portfolio optimization platform.
- Implemented ARIMA/SARIMA and LSTM models for financial time-series prediction.
- Applied Modern Portfolio Theory (MPT) to optimize investment portfolios.
- Performed backtesting and risk-return analysis to evaluate investment strategies.

Brent Oil Price Analysis

Technologies: Python, Streamlit, React, Flask, PostgreSQL

- Developed a data analytics platform for analyzing Brent crude oil price trends and market fluctuations.
- Built interactive dashboards to visualize historical price movements and geopolitical impacts.
- Implemented forecasting and explainability models to generate business insights.
- Applied testing and CI/CD practices to improve reliability and maintainability.
